

Virtual Chief Information Security Officer (vCISO)

Today, many organizations are being asked by their customers, insurance carriers, regulatory bodies, auditors, and others if they have a chief information security officer (CISO), responsible for cybersecurity risk, on staff. However, many small and medium-sized businesses don't have the capacity to support this initiative internally or cannot financially justify a full-time resource to fill this need.

That's why Avalon offers virtual chief information security officer (vCISO) services. This hybrid approach includes a block of hours every month in which our security management experts become an extension of your team, overseeing the design, development, and integration of your cybersecurity program. This allows you to benefit from the experience and qualifications of a CISO yet maintain a budget that works for your organization.

The Process

1. **Risk assessment** – First, our security experts perform assessments to evaluate administrative, technical, and physical risks, so we can build a roadmap to improvement. We work with you and your management team, board, and additional stakeholders to learn your organization and business drivers, as well as the systems and data used.
2. **Roadmap** – Based on our findings, we determine which objectives are top priority. Then, our experts develop the strategic vision, resources, and protocols you require to maintain an appropriately sized, measured, and effective security program.
3. **vCISO engagement** – Our battle-tested team then guides your organization along the path to security success, assisting you through coaching, policy development, and whatever else you require to maintain – and mature – your security posture.

The Cost

The average annual salary of a full-time CISO employee is over [\\$343,000](#). For a vCISO (a.k.a. fractional CISO), the cost of services is based on a variety of factors, including the size of your organization, how many devices reside in your network, and how many hours of assistance you require.

Avalon's fees start at around \$4,000 a month, where a vCISO will guide your business through risk assessments and prioritization, security priority planning, policy development, incident response planning, and many other consulting services. Over time, our monthly cost will go down as your company begins to mature its overall security program, and security accountabilities are distributed among your current employees.

Virtual Chief Information Security Officer (vCISO)
